Summary

Frontend Engineer with 4 years of experience building complex, scalable SaaS applications using React, Next.js, TypeScript, and JavaScript. Experienced in owning business-critical features end-to-end, designing reusable frontend architectures, optimizing performance, and delivering reliable, user-centric applications. Strong background in Jest, CI/CD, Docker, API integration, and micro-frontend architecture.

Technical Skills

- **Frontend:** React, Next.js, Redux, JavaScript (ES6+), TypeScript, HTML5, CSS3, Material-UI
- **Tooling & Testing:** Webpack, Babel, Jest, Yarn
- **DevOps:** GitLab, Git, Docker, GitLab CI/CD, Micro-frontend (Module Federation)

Professional experience

Software Engineer 2 - Frontend | Gupshup

July 2024 - Nov 2025

- Led end-to-end development of Broadcast and Automated Campaigns in React, delivering interactive workflows, two-way messaging, and date-based triggers for enterprise customers.
- Migrated three production modules from JavaScript to TypeScript, improving maintainability, reducing runtime errors, and increasing development velocity by ~40%.
- Architected and developed the Events module, centralizing event management, segmentation, trigger orchestration, and reporting across products.
- Improved frontend performance by optimizing rendering, implementing lazy loading, and refactoring critical React components, reducing page load times by ~30%.
- Owned CI/CD and deployment workflows using GitLab and Docker, enabling reliable production releases and faster delivery.
- Integrated AI-assisted development workflows to speed up implementation, improve code quality, and reduce repetitive engineering effort.

Software Engineer 1 - Frontend | Gupshup

July 2022 - July 2024

- Owned the Customer Data Platform (CDP), architecting React-based features for segmentation, profile management, custom properties, and list management used by enterprise customers.
- Built Integrations and Automated Campaigns modules, enabling third-party event ingestion, automated workflows, and analytics-driven customer journeys.
- Established unit testing with Jest, improving code coverage, reducing production defects, and increasing release stability.
- Enhanced React rendering performance by minimizing unnecessary re-renders and optimizing component architecture, improving frontend performance by ~20%.
- Developed a reusable persistent navigation system, ensuring a consistent user experience across multiple product modules.

SDE Intern | Gupshup

Jan 2022 - July 2022

- Developed interactive analytics dashboards using React, creating reusable charts and data visualizations that improved business reporting and user insights.
- Shipped 10+ production-ready frontend features, optimizing React components and application performance to improve responsiveness by ~20%.

Education

• B.Tech | Information Technology

Rajarambapu Institute of Technology, Sangli
GPA 8.08

July 2018 - July 2022
